

Excelta @ DigiKey — Baseline Analysis (2026-06-30)

Data quality: **PASS** · 1330 SKUs · single snapshot (**T=0**). inventory_value = list_price x visible_stock (proxy; not COGS/sell-through). Trend/demand analysis is **gated** until ≥ 2 daily snapshots exist.

Bottom line (answer-first)

1. **Value is extreme-Pareto.** 157 SKUs (24% of stocked SKUs) hold **80%** of the **\$501,745** visible inventory value. Manage these as A-class.
2. **Availability is the biggest leak.** Overall stockout rate **51%** — over half the catalog is unbuyable right now, concentrated in high-value lines.
3. **Pricing is wide and under-laddered.** Median list **\$54.84**, max **\$2,427**; only **719** SKUs expose a volume discount.

Lens 1 — Distributor / category management

Inventory value by top category (proxy):

Category	Parts	In stock	Stockout	Inv. value
tweezers	551	318	42%	\$276,528
wire cutters	194	47	76%	\$79,711
specialized tools	149	87	42%	\$44,347
pliers	144	69	52%	\$22,643
knives scissors cutting tools	92	55	40%	\$16,591

Highest-stockout sizable categories (availability risk):

Category	Parts	Stockout rate
screw and nut drivers	26	96%
wire cutters	194	76%
accessories	72	57%
pliers	144	52%
excavators hooks picks probes tuning tools	30	47%

Move: prioritize replenishment/sourcing where stockout rate AND inventory value are both high; rationalize the **150** dead/quote-only SKUs.

Lens 2 — Pricing strategy

- Priced SKUs: **1180**; quote-only (\$0): **150**.

- Distribution (right-skewed): median **\$54.84**, P90 **\$281**, max **\$2,427**.
- Volume-discount coverage: **719** SKUs; median discount depth **15%**.
- Highest intra-category price dispersion (peer-group inconsistency to investigate):
 - knives scissors cutting tools: 79 SKUs, spread 788.1x, CV 2.399
 - specialized tools: 141 SKUs, spread 1605.5x, CV 1.966
 - excavators hooks picks probes tuning tools: 26 SKUs, spread 68.9x, CV 1.193
 - pliers: 132 SKUs, spread 23.2x, CV 0.92
 - accessories: 60 SKUs, spread 59.4x, CV 0.896

Move: standardize price ladders on A-tier SKUs; resolve \$0/quote-only listings (lost conversion).

Lens 3 — Competitive / market footprint

- Catalog footprint: **22** categories, **1330** SKUs; deepest = **tweezers** (551 SKUs).
- Availability competitiveness (in-stock share): **49%**.
- *Caveat:* single-brand snapshot — positioning is relative to Excelta's own catalog, not competitors. True competitive benchmarking needs peer-manufacturer snapshots (a future scraper extension).

What we deliberately did NOT claim (no mistakes)

- No trend, churn, restock-velocity, or demand numbers — impossible from one snapshot.
- Inventory value is a **list x visible-stock proxy**, not COGS or sell-through.
- \$0-price SKUs excluded from price stats; qty=0 counted as a real state, never imputed.

Next

- Accumulate daily snapshots -> unlock WS6 (restock velocity, stockout duration, price-change detection, new/discontinued SKU flow).
